Hi All,

Apologies for the wrinkle in schedule. I can no longer meet tomorrow. Possible to reschedule an influencer strategy kick-off call on Thursday. I anticipate we'll need about 45 min – anytime between 11-1pm works for me

Thanks again !

Hello all,

[REDACTED], we missed you on Thursday, but we're happy to connect next week. Next Wednesday at Noon works for [REDACTED] and I. Would you like to send a calendar invite or should we?

Thank you for flagging all the materials below. We'll share them with our teams internally.

Have a good weekend,

[REDACTED]

Dear [REDACTED]: Hope this note finds you well. Sorry to have missed the call yesterday. We have a few campaign updates if you are available to meet next week.

[REDACTED] please see below for the latest list of expert Q&A/trusted messenger videos for your consideration to highlight in relevant places. We'd appreciate hearing about any major vaccine information needs or misinformation narratives or information needs you see emerging in YouTube – we have some upcoming video shoots in the works. [REDACTED] is moving influencer work forward – more to come on that front.

Best,

Trusted Messengers

Hi All,

Thanks for your willingness to connect today. Our team is happy to touch base at 5pm ET.

We are also excited to share that the new Search feature that we previewed to you on Tuesday that contains the [vaccines.gov](https://www.vaccines.gov) hotline launched this morning at 5 am (screenshot below) this morning and is currently rolling out to all users. Once fully ramped, you can see it by searching terms like "covid-19 vaccine near me"

As discussed, we will continue to improve the user experience, and we look forward to connecting today.

Thanks,
[REDACTED]

Subject: [EXTERNAL] Re: Follow up re vaccine search infobox and other results

Hi All,

We thought it would be helpful to share a quick update on our product plans to help users get more information on COVID-19 vaccines:

We're making good progress toward our ability to launch a module by the end of this week that will include the following:

"Everyone 12 years of age and older is now eligible to get a COVID-19 vaccination. Find an appointment on [vaccines.gov](https://www.vaccines.gov). Call [1-800-232-0233](https://www.18002320233.com) for more information."

This messaging fits within our current UI parameters and reflects the latest CDC messaging and the vaccines.gov link will take users to the vaccines.gov website. Clicking on the hotline number will open the option to call the hotline on a mobile phone. And for us this is the fastest route to get this information out to users.

At the same time, we plan to continue to improve the user experience, add additional information, and iterate the hotline module shortly after the initial launch (including evaluating how to integrate text messaging).

We hope that gives you a sense of updates on our progress to continue to respond to evolving user needs. Feel free to let us know if you have any questions.

Thanks,
[REDACTED]

On Fri, May 21, 2021 at 3:12 PM [REDACTED]@google.com> wrote:

Hi Mina,

Thank you for sharing your feedback with us. Throughout the pandemic, Google has been collaborating closely with health authorities like the CDC to highlight authoritative information, tips, and vaccine safety content to combat misinformation. We have also launched several initiatives and product features across Search, YouTube, and Maps to promote vaccine confidence including:

- **Highlighting vaccination locations in Google Search and Maps** including a PSA to prompt Americans to "find COVID19 vaccine location near me" for the next two weeks.
- **Creating our "Get the Facts" and "Get Back To What You Love" PSAs** that launched in April already have over 250 US million views.
- **Activating YouTube creators** through a homepage takeover, creator "shorts" and free emojis to inspire young people to get vaccinated.
- **Expanding our Google.org grants to 500 Community Based Organizations** to set up vaccination sites and reach out to communities of color and rural populations through the CDC Foundation, Partners in Health, Team Rubicon, VaccineFinder, Ad Council, and UnidosUS.
- **Broadening the reach of YouTube's PSA campaign**. Our "Get Back To What You Love" PSAs will be promoted on YouTube, broadcast TV, radio, and paid social media aiming to reach 180M Americans (mostly 18-34 yrs) by the end of July, serving over 2.5B impressions.

We continue to update our products and campaigns to meet the most relevant user needs as the US vaccine landscape evolves, especially given the CDC's recently expanded COVID-19 vaccine eligibility to everyone ages 12+. With that in mind, we have been working with our product teams on a few updates to our COVID-19 Vaccines Search experience to help users find the most relevant vaccine resources including:

"Getting the Vaccine" - highlighting Vaccines.gov and the hotline
Vaccines & Kids - highlighting the latest CDC guidance for children

We expect to launch and ramp the [vaccines.gov](https://www.vaccines.gov) and hotline updates as soon as possible. In the meantime, we will continue to promote vaccine confidence campaigns to address vaccine hesitancy. Please let us know if you have any questions or would like to connect further about any of the updates above.

Thanks,
[REDACTED]

On Fri, May 21, 2021 at 9:20 AM [REDACTED]@google.com> wrote:

Thank you for this Mina. The teams are already working on this so we will get an update. Adding [REDACTED] who is the best POC on the 1-800 and other info since he is in the mix on that work.

[REDACTED] can work on assembling key team members on the commonly asked questions area and other potential ideas.

Thanks!

On Thu, May 20, 2021, 7:17 PM Hsiang, Mina K. EOP/OMB [REDACTED]@omb.eop.gov> wrote:

[REDACTED]
Thanks again for your time yesterday, really appreciate it. This will be critically helpful for the nationwide vaccination effort.

Per our discussion, wanted to flag both the urgent item for you that would be a clear and simple win here in writing because it's pretty straightforward, and then would also love to meet with your team/the appropriate folks to sort out other items which could further be improved (like you mentioned answers to the frequently searched questions, etc). Let us know the best way to arrange that discussion.

The quick win-

As I noted, searching the major keywords related to vaccination (vaccine, vaccines, covid vaccine, etc) does not currently display and quick info for who and how to get vaccinated, but does return a "who can get vaccinated now" link which varies by state. We'd recommend removing that link (since it no longer varies by state, so the information can be surfaced directly) and adding a knowledge graph infobox at the top of the search results page with the following information:

Getting the COVID-19 Vaccine

Everyone age 12 and older living in the United States can get a COVID-19 vaccine free of charge, regardless of immigration status or health insurance.

Find COVID-19 vaccines near you:

- Vaccines.gov
- Text your Zip Code to 438829
- [800-232-0233](tel:800-232-0233)

[Alt contact info for Spanish]

- Vacunas.gov
- Text your Zip Code to 822862
- [800-232-0233](tel:800-232-0233)

And again, would also love to connect with the team. Let us know next steps there.

Thanks again for this critical work!

Best,
Mina

Subject: Updates following yesterday's meeting
Flag: Followup

Andy, Rob, Josh and Clarke,

Thanks for taking the time to connect yesterday. We appreciate your feedback on what would be most helpful to you as you continue your work. Following our meeting, we had further conversations with our teams and in an effort to be responsive to your questions we have two updates to share:

The first update is related to data we can share on a regular basis with the White House and HHS on vaccine intent. We will be able to share survey-based data on intent to vaccinate (% of people who have vaccinated, % of people who intend to vaccinate, % of people who do not intend to vaccinate) for the US with some demographic breakdowns. We can begin to send this data by the end of next week, and we'll regularly refresh this data for the rest of 2021. Additionally, we'll plan to update our enforcement statistics monthly for your awareness.

The second is to provide additional context around the focused work that is happening across our safety and integrity, product, engineering, ops, policy, and other teams, where we've made protecting the global vaccine our top priority. We're building on our work across the past several years on misinformation, our election integrity work, and our work over the past year to fight COVID-19 vaccine misinformation and to amplify authoritative information.

Now that vaccines are rolling out and we are seeing more discussion about vaccines on the platform, we are focusing on understanding how our policies and enforcement approaches are holding up to this evolving conversation. Our prioritization of these issues don't have an end date—we are adapting to the dynamic nature of this pandemic and implementing what we learn as we go. Specifically, we are accelerating progress on a few key areas:

- 1. Combatting vaccine misinformation and de-amplifying content that could contribute to vaccine hesitancy:** We're improving the effectiveness of our existing enforcement systems (particularly focusing on entities that repeatedly post vaccine misinformation), mitigating viral content that could lead to vaccine hesitancy, and ensuring our recommendations / discovery surfaces are not amplifying vaccine hesitancy-inducing content.
- 2. Promoting the vaccine and providing authoritative information:** We will use our scale and product to increase people's intent to get vaccinated by showing people authoritative information from the CDC and leading health partners to counter misinformation and increase education, awareness, and trust. We'll also help people get the vaccine by helping people know when they're eligible and to find vaccines near them. Finally, we will use our reach to drive vaccine acceptance by providing personalized ads and increase visibility of vaccinations in people's networks (e.g., friends, healthcare workers, public figures) to inspire them to get vaccinated. We are working on specific plans for how to support communities most impacted by COVID (Black, Latinx, Indigenous), and would welcome your input. We'd also welcome partnering with you to amplify efforts to support these communities.

We'd be happy to schedule a follow-up discussion to provide additional information on this work, or on the data we plan to provide going forward. We'll also have more information very soon on access to CrowdTangle as discussed.

Look forward to continued work here, and please don't hesitate to let us know if you have any questions.

Thanks,

Rob, Clarke and Josh -

Thanks again for meeting with us today. As we discussed, we are building on our continued efforts to remove the most harmful COVID-19 misleading information from the service by applying labels to Tweets that may contain misleading information about COVID-19 vaccines. We have also introduced a strike system that determines when further enforcement action is necessary. You can read more in the announcement on our [blog](#).

As we said, we are committed to working with stakeholders in the public, private and non-profit sectors to address the reliability of covid information online and look forward to continued dialogue about joint efforts.

Don't hesitate to let me know if you have additional questions.

Warmest,
[REDACTED]

Hi All,

Thanks for the productive meeting yesterday — we're excited about the potential here with the CDC.
(Side note, the misinfo themes we're seeing will be forthcoming in a separate email.)

We will be proposing to the CDC a phased marketing approach, which will build and scale as the vaccine becomes more widely available. Our target audience is people eligible to get the vaccine and their family and friends. The goal is to get vaccinated people to change their profile frame and share with their network that they've been vaccinated.

Phase 1 - February

Introduce profile frames on Facebook (i.e. Frames Tray & Profile) and begin to drive adoption among Public Figures.

- Invite Public Figures on FB who have publicly shared that they have gotten the vaccine to update their profile frames via targeted outreach
- Uprank the Frame in the Frames tray on Facebook
- Feature the Frame in the footer of Profile Pic updates

Phase 2 - March

Building on our Phase 1 efforts, we will expand the Frames' visibility among people who have been vaccinated.

- Accelerate Public Figures outreach for CDC to engage Public Figures and news, sports, entertainment, and media partners via scaled newsletters.
- Joint Press Moment (similar to the NHS announcement we shared earlier this week)
- Aggregation of stories of friends adopting the frames to be featured in the Newsfeed
- A Profile prompt targeted to those eligible for the vaccine by job, age group, etc. This will expand as vaccine availability expands.
- An in-feed notification targeting those who are eligible.

This effort is a whole of platform approach, meeting users where they are and we believe would positively impact vaccine adoption and curb vaccine hesitancy. This is what our teams have also shared with the CDC, and we're looking forward to continuing this partnership.

Best,

In the interest of making sure everyone's prepared, one of the questions I'll have around this initiative is around algorithmic promotion (eg: when someone changes their profile picture, do higher number of their friends see it).

Relatedly, I'm wondering what plans are in the works (if any) to replicate the strategy you deployed around lock downs – the "stay at home" stickers/promoted Instagram story.

Looking forward!

Hi All —

Following up here — the UK's NHS has two Profile Frames that went live today<%3e<https://www.gov.uk/government/news/new-campaign-to-support-vaccine-roll-out-backed-by-social-media-companies-and-british-institutions%3c%3c>>, which look like this (mocked up on my testing profile below). They're quite a powerful tool for showing solidarity / involvement — would be great to talk early next week to discuss using it for US vaccine campaigns.

Subject: Facebook proposal to help mitigate vaccination hesitancy

Good afternoon Courtney, Rob, and Clarke,

I hope everyone is doing well and taking care amidst this wintry weather. I'm reaching out today with an immediate idea from the team that we think will significantly help with outreach/hard to reach communities to help mitigate vaccination hesitancy. For our part, we have some of our product reps available to speak more deeply to the profile frames proposal

below at your soonest availability.

I also want to circle back on the misinfo meeting we are looking forward to having. It would include some new insights we have and a deeper discussion of what more we can do. We think best to have the proper reps to include yourself, HHS and CDC. Can we look to you to help surface dates that this can take place soon? We also spoke to Josh at HHS about the frame proposal below and they are also looking forward to a deeper discussion on that and a discussion on misinformation. We are not sure the appropriate rep at CDC that you would suggest for the misinformation meeting, but we look forward to meeting with the team you bring together.

Profile Frames: Some governments and NGO partners worldwide are currently executing campaigns on Facebook encouraging people to share that they got vaccinated (or plan to) in order to normalize getting the vaccine. For example, some partners plan to execute a major campaign starting next week centered around profile frames and similar assets on Facebook and Instagram (e.g. "I'm COVID vaccinated") that people can opt-into. This campaign can also activate a broad set of trusted influencers and public figures to help. These partners asked us to partner with them in promoting this campaign, which we are fully supporting.

As such, we believe that a similar effort could make a significant difference around vaccination intent in the US and we would like to explore supporting such a campaign here. Given the scale of our platforms and daily reach, a well-executed campaign could be seen by millions of people in the United States alone, and potentially help change attitudes toward vaccination.

Attached are some initial design explorations that we are iterating on. These are not final design templates (more for illustrative purposes). We can provide the final templates to you by Friday.

We're also happy to further discuss how we believe this can help gain momentum around vaccine uptake and confidence, and explore how we can support promotional efforts to drive adoption of these frames. Once you're comfortable and in a position to move forward, we would just need the digital teams to upload the frames through the official Facebook accounts you'd like to use; we're also happy to help the teams do this.

We are excited to explore partnering with the US government on this and make a significant difference around vaccination intent domestically. We can move as fast as needed to activate this campaign.

One quick follow-up [REDACTED] and Josh,

CDC is aware that we have set aside 14.5 million in Facebook Ad Credits for them, but we have done the same amount for HHS for use in any COVID-19 campaigns you may want to run for outreach to communities. This will really increase your ability to reach hard to reach communities nation-wide. We planned to discuss this in detail during our meeting, but sharing here in case that meeting is delayed.

Best,

Hi Josh and [REDACTED]

I also wanted to follow-up with you on setting up a meeting to discuss possible ways that that HHS/broader health agencies can use social media for COVID-19 vaccination education and outreach. We have some of the traditional ways that you are aware of, but we also have areas that we have developed over the past year with several of our non-profit partners.

We know it's a very busy time for all of you, but didn't want to let too much time go by on that time-sensitive item.

Do let me know if meeting to discuss/meet with our teams working on some of the various work we shared with you in previous emails makes sense this week or next?

Best,

From: [REDACTED]@fb.com>

Subject: COVID-19 Outreach to communities worldwide

Good afternoon Josh and [REDACTED]

We wanted to make sure you saw our announcements today about running the largest worldwide campaign to promote authoritative COVID-19 vaccine information and expanding our efforts to remove false claims on Facebook and Instagram about COVID-19, COVID-19 vaccines and vaccines in general during the pandemic. More details are in our Newsroom: [authoritative COVID-19 vaccine information](#) and [COVID-19 and vaccine misinformation](#).

Helping People Find Where and When They Can Get Vaccinated

- Starting this week, we'll feature links in the COVID-19 Information Center to local ministry of health websites to help people understand whether they're eligible to get vaccinated and how to do so.
- And in the coming weeks, as more information becomes available, we'll continue to improve this feature, making it easier for people to see where and when they can get vaccinated in just a few taps.

Sharing Credible Information About COVID-19 Vaccines

- We're working with health organizations and community leaders to run campaigns on our platform promoting accurate information about COVID-19 vaccines and encouraging people to get vaccinated.
- We're giving over \$120 million in ad credits to help health ministries, NGOs and UN agencies reach billions of people around the world with COVID-19 vaccine and preventive health information.
- In the US, we're partnering with the Johns Hopkins Bloomberg School of Public Health to reach Native American communities, Black communities and Latinx communities, among others, with science and evidence-based content that addresses the questions and concerns these communities have.
- We're also working with AARP to reach Americans over 50 with educational content about COVID-19 vaccines, including Spanish-language content designed to reach Latinx and Hispanic communities.

Combating Vaccine Misinformation

- We are expanding our efforts to remove false claims on Facebook and Instagram about COVID-19, COVID-19 vaccines and vaccines in general during the pandemic. Since December, we've [removed false claims](#) about COVID-19 vaccines that have been debunked by public health experts.
- Today, following consultations with leading health organizations, including the [World Health Organization](#) (WHO), we are expanding the list of false claims we will remove to include additional debunked claims about the coronavirus and vaccines. We already [prohibit these claims](#) in ads.
- Groups, Pages and accounts on Facebook and Instagram that repeatedly share these debunked claims may be removed altogether. We are also requiring some admins for groups with admins or members who have violated our COVID-19 policies to temporarily approve all posts within their group.
- When people search for vaccine or COVID-19 related content on Facebook, we promote relevant, authoritative results and provide third-party resources to connect people to expert information about vaccines. On Instagram, in addition to surfacing authoritative results in Search, in the coming weeks we're making it harder to find accounts in search that discourage people from getting vaccinated.
- [As we noted last month](#) in response to guidance from the Oversight Board, we are committed to providing more transparency around these policies. You can read the detailed updates in Facebook's [Community Standards](#) and in our [Help Center](#).

Providing Data to Inform Effective Vaccine Delivery

- Last year, we began collaborating with Carnegie Mellon University Delphi Research Group and the University of Maryland on COVID-19 surveys about symptoms people are experiencing, mask wearing behaviors and access to care. With over 50 million responses to date, the survey program is one of the largest ever conducted and has helped health researchers better monitor and forecast the spread of COVID-19.
- To help guide the effective delivery of COVID-19 vaccines, the survey data will provide a better understanding of [trends in vaccine intent](#) across sociodemographics, race, geography and more. The scale of the survey will also allow for faster updates on changes in trends, such as whether vaccine intent is going up or down in California in a given week and better insights on how vaccine intent varies at a local level. We'll share these new insights including [vaccine attitudes at a county level](#) in the US as well as [globally](#).

These new policies and programs will help us continue to take aggressive action against misinformation about COVID-19 and vaccines and help people find where and when they can get vaccinated. You can read more about how we're supporting COVID-19 relief efforts and keeping people informed at our [COVID-19 action page](#).

Subject: Re: [EXTERNAL] Re: Thanks--

Good afternoon Courtney, Josh, Rob and Clarke,

Thank you for the call on January 19, just before the inauguration. Congratulations on a memorable ceremony. We are excited to work with you all on our proactive education campaigns to build confidence in COVID-19 vaccines.

Facebook has been meeting with the CDC weekly on Wednesdays (3pm Eastern) for the last year to coordinate on COVID-19 initiatives and pull in relevant teams to leverage our platform in disseminating CDC's latest guidance to the right populations. We remain eager to help the Administration get out health messages around COVID-19 and vaccinations and would like to set up a weekly meeting with you/HHS to move forward on the vaccination work.

As part of our parting discussion, we offered to follow up with you all on a few of the work streams we have that support your mission. You will find those below. We also offered a quick sync on how we have been working with the White House, HHS and CDC and other key departments we are partnering with which we can do when we meet again.

Do let us know if you have questions about the information below and dates and times that work for a weekly meeting.

Health partnerships for campaigns and health insights

Over the past year, we've worked with both health organizations and influencers to drive campaigns on topics like mask wearing, social distancing, getting vaccinated for the flu and more. We've found compelling evidence suggesting that

these campaigns can influence people's attitudes and behaviors. Here are some tactics we and our partners have found to work quite well (keeping in mind that there are no hard and fast rules!):

- **Health organizations (nonprofits, academic institutions, etc.)**

- Health messages that show people a positive action they can take to improve their health are often more motivating than fear-based messaging.
- Health messages that dispel concerns about safety have been especially effective for vaccine campaigns — for example, one of our partners' most successful flu vaccine campaigns was centered around the message, "No, you cannot get the flu from the flu shot."
- Many of our partners say they get the best results when designing campaigns with the explicit goal of creating content that viewers will want to share with their friends and family. This enables them to get much broader reach/distribution and also capitalize on the fact that people often trust guidance that comes from their friends and loved ones.
- Using interest-based targeting for health messaging campaigns has also been successful; one of our partners was able to move the needle around mask-wearing attitudes/behaviors in the US through a campaign where they served different creative to different audiences (e.g., parents with children, Spanish speakers, and rural moderates saw very different content, but all with the central 'wear a mask' message).

- **Other influencers (including public figures)**

- Engaging celebrities to share content of themselves wearing a mask has been one of our most successful interventions to-date. This summer, we reached out to our public figure partners encouraging them to post content of themselves on Facebook and Instagram with the #WearAMask hashtag. We then amplified this content to reach more people on our platforms. The campaign led to an 8 point increase in perceived social approval (a key indicator of behavior change) to wear a mask among people who viewed the content.

○ *Note:* We've received feedback from our partners that these campaigns would be even more successful if the ask to engage in health campaigns came from a health authority — like the CDC or HHS — instead of from Facebook. This is a key area of partnership that we'd like to explore with your team moving forward: for example, if you are able to help activate influencers and partners for campaigns, we can quite easily amplify the content they post to specific audiences.

- We are also working with some of our partners on COVID-19 vaccine message testing to determine which messages resonate with different communities. One of the partners we're working with here is the Behavioral Insights Team (BIT), an organization that applies nudge theory to inform policy and public services. They recently ran an online experiment to test 7 different messages promoting vaccine confidence and willingness to vaccinate in the US. The Trust building message they tested had the strongest results overall, both among general populations and Black Americans. The specific message that performed the best was: "The COVID-19 vaccine was developed for safety before speed. Over 70,000 people have already tested it, so you can get it safely." BIT has permitted us to include the full results here, attached, in case these can be helpful to you as you design your campaigns — and we're also happy to discuss further.

- In late December, we met with senior CDC career staff around educational campaigns and survey data (our CMU COVID survey below). They immediately understood the value of what we were offering and are interested in collaborating more closely. They are interested in using our large-scale surveys to inform the vaccine response and we are in active discussions on educational campaigns. The meeting was positive and completely focused on substance and impact.

WhatsApp

- WhatsApp's vaccine support strategy is to partner with governments, health ministries, global health authorities and key healthcare industry stakeholders to provide tools on WhatsApp to help citizens get educated about COVID-19 vaccines, schedule their appointments and get critical updates to get vaccinated.

- In 2020, WhatsApp partnered with the WHO, UNICEF and 100+ governments/health ministries around the world to send critical updates about COVID-19 out to citizens. These efforts positively impacted the lives of tens of millions of people with over 3 billion messages exchanged between citizens and governments.
- In 2021, WhatsApp has established partnerships with the WHO and UNICEF, and is pursuing partnerships with dozens of governments around the world to provide critical last mile support to ensure that people get accurate information about COVID-19 vaccines and get vaccinated. For example, WhatsApp recently partnered with the Ministry of Health in Indonesia to enable people register and get important reminders to get vaccinated. The service was rapidly adopted, with 500,000+ health workers signing up for the service in the first few days of launch.
- **In the US, WhatsApp is seeking to:**
 - **Partner with the CDC, HHS, and key health authorities at the state/local level** to empower people on WhatsApp (particularly those in the Latin-X and immigrant/minority communities where WhatsApp usage is high) with accurate information about vaccines, enable people to schedule their vaccine appointments, and send critical updates to remind people to receive their required number of vaccine doses.
 - **Leverage Facebook/Instagram ads that click to WhatsApp** campaigns to reach millions of people in the US who can engage directly on WhatsApp with the CDC, HHS, and key health authorities at the state/local level.
- WhatsApp also has an on-going **partnership with the Poynter Institute/International Fact Checking Network** on a fact checking WhatsApp service to combat COVID-19 misinformation in English and Spanish. WhatsApp will continue to accelerate this partnership with planned efforts to educate US citizens in 2021 by combating vaccine related myths and rumors on WhatsApp.

CrowdTangle

- **Bi-weekly COVID content reports:** We have recently begun sharing bi-weekly COVID content reports with the CDC. The goal of these reports is to share emerging trends, particularly around content to “watch out” for, and provide some localized views on potentially problematic content. Facebook’s CrowdTangle tool is used to develop these reports. CrowdTangle is looking at public content only, and analyzes a database that includes a subset of Pages, verified Profiles, public Instagram accounts and Groups. Thus, these reports should be directional and not be the sole source of information or be considered the definitive look at all problematic content on the platform.
- **Access to CrowdTangle:** At the start of the pandemic, CrowdTangle has been in use by the CDC for research and social media monitoring purposes. FEMA has been a user of CrowdTangle since 2015, and has used it to create real-time displays for their various regional teams to support their social media situational awareness efforts and help direct needs or information clarification. The CrowdTangle team has supported these two agencies with trainings, product resources, and list building assistance.

Facebook Ads

- Supporting government organizations, such as Governments or Ministries of Health, with communication related to COVID-19 became a top priority for us as a company. We mobilized multiple dedicated response teams – including measurement (marketing science) — and worked closely with Facebook Marketing Partners (FMPs) to ensure that people were adequately informed by their governments and knew where to go for resources. We’ve provided more than \$35M worth of ad coupons and extensive training and consultation on how to leverage ad credits to more than 230 government entities in over 150 countries. This enabled governments to get their most important COVID-19 messaging across to as many people as possible.
- In the US specifically, as part of our we have maintained a very close working relationship with CDC, including weekly meetings to discuss policy, communications and advertising related topics. CDC has been a recipient of our ad credit program, allowing them to reach people with essential health messaging. They are launching their first measurement study imminently to measure the effectiveness of their media on changing knowledge, attitudes and practices.

- Similarly, our team has also been working closely with HHS and their media agency on their “Slow the Spread” campaign, and working on launching our first Brand Lift study to understand attitudinal and intent shifts around their latest “Stop the Spread” campaigns.

Ad Council Partnership

- For over 75 years, The Ad Council has been distributing important public service announcements in partnership with government agencies and nonprofits.
- Ad Council announced in late November 2020 in [The New York Times](#) that it will be working towards a commitment to meet the marketing and communications challenges associated with vaccine confidence and adoption. Facebook, along with many other corporations and NGOs, is partnering on this effort through funding and on platform support. The funding partnership was recently [highlighted in the press](#).
- Facebook is working with Ad Council as an in-market messaging research partner by donating ad credits, digital-first creative as well as media and measurement support for the Ad Council’s work with the NGO community to help build people’s confidence of the COVID-19 vaccines. Facebook will work with Ad Council to release high level results from this initial effort as well as creative assets to make available for other organizations to leverage. From these learnings, Ad Council will work with Facebook to launch a larger spring campaign to drive vaccine confidence through donated ads on the platform.
- In 2020, Facebook donated over \$1 million in ad credits to Ad Council to support campaigns around COVID-19, often in partnership with the CDC and HHS, which focused on mask wearing, social distancing, dismantling stereotypes about the virus and other topics.

Vaccine Data/Survey

Here are some more details on the CMU / Facebook survey.

As of last week, CMU has updated their public API and [map](#) to reflect vaccine intent data from the current version on the instrument in the US. We believe this is the largest scale and most granular source of public data for vaccine intent that exists (in the US, we’re averaging 100s of Ks of responses / week since April across many languages).

It has:

- 1) Daily granularity (allowing faster understanding of changes in trends)
- 2) County and zip-code level resolution (allowing faster understanding of local differences)
- 3) Sociodemographic resolution—including age, occupation, and race/ethnicity (allowing for clearer understanding of intent by vaccine priority populations—like healthcare workers or 65+ or those with diabetes/cancer/etc.—as well as helping inform equity efforts)

Not all of these aggregations are available publicly, but microdata access are available for free under DUA to academic and nonprofit institutions. If there are specific aggregations that are a top priority for you, we can work with the academic partners to surface them publicly over API or CSV. We’ve been engaging with the CDC on this survey as well. Documentation of [the full survey instrument is here](#); the [latest instrument](#) as well as an [overview](#) of the broader survey effort are attached via PDF.

In addition to intent, there are also now questions around vaccine rates, so similar maps can be generated around % of population that report having gotten vaccinated worldwide by country (or subpopulations, like 65+, healthcare workers).

The same survey has been used for months by organizations like IHME to track mask wearing rates. Here’s a [deep-dive on its utility and limitations](#) for this use case by our partners at CMU, [REDACTED] and colleagues at Resolve to Save Lives should be fairly familiar with some of these data as well.

On behalf of our broader team,

Hi All,

Thanks for your willingness to connect today. Our team is happy to touch base at 5pm ET.

We are also excited to share that the new Search feature that we previewed to you on Tuesday that contains the vaccines.gov hotline launched this morning at 5 am (screenshot below) this morning and is currently rolling out to all users. Once fully ramped, you can see it by searching terms like "covid-19 vaccine near me"

As discussed, we will continue to improve the user experience, and we look forward to connecting today.

Thanks

Subject: [EXTERNAL] Re: Follow up re vaccine search infobox and other results

Hi All,

We thought it would be helpful to share a quick update on our product plans to help users get more information on COVID-19 vaccines:

We're making good progress toward our ability to launch a module by the end of this week that will include the following:

"Everyone 12 years of age and older is now eligible to get a COVID-19 vaccination. Find an appointment on vaccines.gov. Call [1-800-232-0233](tel:1-800-232-0233) for more information."

This messaging fits within our current UI parameters and reflects the latest CDC messaging and the vaccines.gov link will take users to the vaccines.gov website. Clicking on the hotline number will open the option to call the hotline on a mobile phone. And for us this is the fastest route to get this information out to users.

At the same time, we plan to continue to improve the user experience, add additional information, and iterate the hotline module shortly after the initial launch (including evaluating how to integrate text messaging).

We hope that gives you a sense of updates on our progress to continue to respond to evolving user needs. Feel free to let us know if you have any questions.

Thanks,
[REDACTED]

Hi Mina,

Thank you for sharing your feedback with us. Throughout the pandemic, Google has been collaborating closely with health authorities like the CDC to highlight authoritative information, tips, and vaccine safety content to combat misinformation. We have also launched several initiatives and product features across Search, YouTube, and Maps to promote vaccine confidence including:

- **Highlighting vaccination locations in Google Search and Maps** including a PSA to prompt Americans to "find COVID19 vaccine location near me" for the next two weeks.
- **Creating our "Get the Facts" and "Get Back To What You Love" PSAs** that launched in April already have over 250 US million views.
- **Activating YouTube creators** through a homepage takeover, creator "shorts" and free emojis to inspire young people to get vaccinated.
- **Expanding our Google.org grants to 500 Community Based Organizations** to set up vaccination sites and reach out to communities of color and rural populations through the CDC Foundation, Partners in Health, Team Rubicon, VaccineFinder, Ad Council, and UnidosUS.
- **Broadening the reach of YouTube's PSA campaign.** Our "Get Back To What You Love" PSAs will be promoted on YouTube, broadcast TV, radio, and paid social media aiming to reach 180M Americans (mostly 18-34 yrs) by the end of July, serving over 2.5B impressions.

We continue to update our products and campaigns to meet the most relevant user needs as the US vaccine landscape evolves, especially given the CDC's recently expanded COVID-19 vaccine eligibility to everyone ages 12+. With that in mind, we have been working with our product teams on a few updates to our COVID-19 Vaccines Search experience to help users find the most relevant vaccine resources including:

"Getting the Vaccine" - highlighting Vaccines.gov and the hotline
Vaccines & Kids - highlighting the latest CDC guidance for children

We expect to launch and ramp the vaccines.gov and hotline updates as soon as possible. In the meantime, we will continue to promote vaccine confidence campaigns to address vaccine

hesitancy. Please let us know if you have any questions or would like to connect further about any of the updates above.

Thanks,
[REDACTED]

Thanks again for your time yesterday, really appreciate it. This will be critically helpful for the nationwide vaccination effort.

Per our discussion, wanted to flag both the urgent item for you that would be a clear and simple win here in writing because it's pretty straightforward, and then would also love to meet with your team/the appropriate folks to sort out other items which could further be improved (like you mentioned answers to the frequently searched questions, etc). Let us know the best way to arrange that discussion.

The quick win-

As I noted, searching the major keywords related to vaccination (vaccine, vaccines, covid vaccine, etc) does not currently display and quick info for who and how to get vaccinated, but does return a "who can get vaccinated now" link which varies by state. We'd recommend removing that link (since it no longer varies by state, so the information can be surfaced directly) and adding a knowledge graph infobox at the top of the search results page with the following information:

Getting the COVID-19 Vaccine

Everyone age 12 and older living in the United States can get a COVID-19 vaccine free of charge, regardless of immigration status or health insurance.

Find COVID-19 vaccines near you:

- Vaccines.gov
- Text your Zip Code to 438829
- [800-232-0233](tel:8002320233)

[Alt contact info for Spanish]

- Vacunas.gov
- Text your Zip Code to 822862

- [800-232-0233](tel:800-232-0233)

And again, would also love to connect with the team. Let us know next steps there.

Thanks again for this critical work!

Best,
Mina

Hi YouTube team –

Just want to add that these videos have an accuracy issue that's raising some internal concern. While the scientific reviewers discuss whether we need to take down the video entirely, we'd like to reduce its visibility as much as possible.

As you can imagine, in this environment of misinformation, it's very important that our own material is verified to be scientifically accurate. Anything you can do to stop promotion of these would be very much appreciated.

Importance: High

Hi [REDACTED]

Hope all is well. Thank you again for helping us promote the new videos on the HHS YouTube channel as they are launched. We received a request to not actively promote the two videos below. Would you kindly halt promotion of these two videos moving forward?

- [Ask Dr. Walensky: How can you protect your family from COVID-19?](#)
- [Ask Dr. Walensky: Why do I still need to wear a mask?](#)

Thank you so much and please let me know if any questions.

Best,

Hi [REDACTED]

Apologies on the delayed response! Thank you so much for reaching out to get us streamlined across the board with our discussions for potential Team Halo/HHS/YouTube partnerships. Given the federal holiday this week and the HHS team will be out of pocket for the remainder of the week, could you provide some times that works for your team to regroup for mid next week to discuss ideas and next steps? Then we can figure out availability on our end afterwards.

Thank you. Have a good evening.

Subject: Team Halo / HHS / YT

Hi all,

Per [REDACTED]'s email kicking off a new thread re: Team Halo and HHS. From my understanding there have been a couple different threads about Team Halo (misinformation/pediatrics etc.) and I like it would be helpful to streamline the communication + align on intent in order to move forward. Please add in any additional people who should be on this thread.

Apologies if this has been stated prior, however, as I've recently been brought into the mix -- would you be able you be able to restate the Team Halo requests and what you're looking to engage with them on? As [REDACTED] mentioned, Team Halo experts tend not to have YouTube channels thus we have to be creative in thinking about how to partner.

If easier, happy to hop on a call early next week to chat through the request and answer in realtime to be able to go back to Team Halo's agency with the request, pending fit. Including some times for a 15-minute call if that ends up being the preferred:

- 11/9, Tuesday - 9AM CT, 2:30-4PM CT
- 11/10, Wednesday - 9-10AM CT, 2-4PM CT

Thanks and have a great weekend,
[REDACTED]

Subject: LinkedIn Meeting re Covid Community Corps

Hi [REDACTED] Tericka, and [REDACTED]

It turns out that LinkedIn Groups can be set up as public and discoverable by search, as well as being open to join or comment rather than gated by an Admin. This would be a more immediate and lighter lift than launching a Showcase page. Here's more: <https://www.linkedin.com/help/linkedin/answer/6/create-a-linkedin-group>

If you do end up still wanting to launch a Showcase page that's totally fine, it will simply require more time and resources to build and maintain a healthy page. Here are the technical steps and we can dig into best practices as needed. <https://www.linkedin.com/help/linkedin/answer/44863/create-a-showcase-page?lang=en>

Also, regarding our Misinformation Policy, please see these resources:

- User Agreement under Section 8.2 "Don'ts" is #18 covering the Professional Community Policies: <https://www.linkedin.com/legal/user-agreement>
- Also, we can look at how the CDC and VA manage their pages for best practices

Thanks!
